

1. Introduction

The Astrological Health Screener computes a sidereal (Vedic) birth chart together with current transits, and produces a rule-based health assessment from multiple classical systems: Parashara, Krishnamurti Paddhati (KP), the D6 Shashthamsa divisional, Shadbala strength, Vimshottari dasha timing, and a natural-language question module. This manual documents every parameter the tool uses and exactly how each one influences the assessment, including the numeric weights and thresholds.

IMPORTANT: This is an educational and self-reflection tool based on classical astrological significations. It is NOT medical advice and does not diagnose, treat, or predict any medical condition. All outputs are astrological indications and risk-sensitive periods only. Always consult a qualified healthcare professional.

2. Inputs

Name

Optional label, shown on the report's Native Details page.

Date of Birth

Gregorian date. Used to compute the Julian Day.

Time of Birth

Local 24h time. Required for houses, Ascendant, Placidus cusps, Shadbala day/night, and all house-based analysis. If unknown, 12:00 is assumed and house-dependent results are skipped.

Place of Birth

Latitude (N positive) and Longitude (E positive). Used for the Ascendant, house cusps and Dig Bala. A city search can auto-fill these via a public geocoding lookup.

UTC offset

Hours east of UTC (e.g. +5.5 for India). Converts local birth time to Universal Time. Confirm daylight saving for the birth date/region.

3. Astronomical engine

Planetary positions use a compact analytical ephemeris (Paul Schlyter's method) with the major perturbation terms for the Moon and for Jupiter/Saturn. Accuracy is within a few arc-minutes - sufficient for sign, nakshatra and KP sub-division boundaries.

Julian Day

Local civil time minus the UTC offset gives Universal Time, converted to a Julian Day for all calculations.

Ayanamsa (Lahiri / Chitrapaksha)

The precessional offset subtracted from tropical longitudes to obtain sidereal (Vedic) longitudes. ~24 degrees in this era, increasing ~50.3 arc-seconds per year.

Obliquity of the ecliptic

Used to convert ecliptic longitude to right ascension and declination.

Ascendant (Lagna)

The rising sidereal degree on the eastern horizon, from RAMC, latitude and obliquity. Defines the 1st house.

Placidus cusps

Twelve house cusps by semi-arc trisection - required for KP cuspal sub-lord analysis. Reduced to equal right-ascension division at the equator and verified monotonic at mid-latitudes.

4. Core placements

Rasi (sign) and degree

The sidereal sign (1 of 12) and degrees within it. The basis of dignity, body-part mapping and divisional charts.

Nakshatra and pada

1 of 27 lunar mansions (13 deg 20' each) and its quarter (pada). The nakshatra lord drives the Vimshottari

dasha and KP significations.

KP sub-lord

Each nakshatra is sub-divided into nine unequal Vimshottari-proportion parts starting from the star lord. The sub-lord is the decisive significator in KP.

Whole-sign houses (Parashara)

House = sign offset from the Lagna sign + 1. Used by the Parashara engine.

Placidus houses (KP)

House determined by which cusp interval a body falls in. Used by the KP engine.

5. Dignity, debilitation and Neecha Bhanga

Dignity

Exalted, own sign, debilitated or neutral, from each planet's exaltation/debilitation/own signs. Exalted/own strengthens the organs a planet governs; debilitated weakens them.

Debilitation (Neecha)

A planet in its debilitation sign in the D1 Rasi chart is functionally weak for the systems it governs - unless cancelled.

Neecha Bhanga (cancellation) conditions - Rasi

- The dispositor (lord of the debilitation sign) is in a kendra (1/4/7/10) from the Lagna or the Moon.
- The planet exalted in that sign is in a kendra from the Lagna or the Moon.
- The debilitated planet is conjunct or aspected by its dispositor.
- The debilitated planet is conjunct or aspected by the planet exalted there.
- The dispositor or that exalted planet is itself exalted.

Neecha Bhanga conditions - Navamsa (D9)

- The debilitated planet attains exaltation in the Navamsa.
- The debilitated planet occupies its own sign in the Navamsa.
- The debilitated planet is Vargottama (same sign in D1 and D9) - a strengthening factor.
- The dispositor is exalted or in its own sign in the Navamsa.

Impact: a debilitation WITHOUT cancellation is reported as a vulnerability and adds risk in the forecast; a CANCELLED debilitation is largely neutralised (and may act as a strength), so the forecast does not penalise it.

6. Shadbala (six-fold strength)

Shadbala measures how capable each of the seven planets is of delivering (and protecting) the matters it governs. Values are in Virupas; 60 Virupas = 1 Rupa. Each planet's total is compared with a classical required minimum.

Sthana Bala

Positional strength: Uchcha (distance from debilitation), Saptavargaja (divisional dignity), Ojayugma (odd/even sign), Kendradi (angular 60 / succedent 30 / cadent 15), and Drekkana strength.

Dig Bala

Directional strength: distance from the planet's powerless point (Sun/Mars strong in the 10th, Jupiter/Mercury in the 1st, Moon/Venus in the 4th, Saturn in the 7th).

Kala Bala

Temporal strength: Nathonnatha (day/night), Paksha (Moon-Sun elongation), and Ayana (declination-based).

Cheshta Bala

Motional strength. Sun uses its Ayana bala, Moon its Paksha bala; others derive from actual speed vs mean motion (retrograde = strong).

Naisargika Bala

Fixed natural strength: Sun 60, Moon 51.4, Venus 42.9, Jupiter 34.3, Mercury 25.7, Mars 17.1, Saturn 8.6 Virupas.

Drik Bala

Aspectual strength: benefic aspects add, malefic aspects subtract.

Required strength (Rupas)

Sun 5, Moon 6, Mars 5, Mercury 7, Jupiter 6.5, Venus 5.5, Saturn 5. Below this = weak; within 80-100% = moderate; at/above = strong.

Motion, direction and declination

Speed and motion

Daily motion (deg/day). Slow or stationary planets are functionally altered.

Retrograde

A planet moving backward (not Sun/Moon). Flagged with the retrograde symbol; intensifies and can make its significations erratic.

Combustion

Within the Sun's orb (Moon 12, Mars 17, Mercury 12, Jupiter 11, Venus 9, Saturn 15 degrees). Weakens the planet's significations.

Declination

Angular distance from the celestial equator; the basis of Ayana Bala (north strengthens Sun/Mars/Jupiter/Venus/Mercury; south strengthens Moon/Saturn).

Impact: a weak, combust, retrograde or slow planet flags the body systems it governs as needing support. In the period forecast, a weak period-lord adds risk (+0.4 weight, combust +0.3), while a strong one is treated as resilient (-0.2).

7. Divisional charts and Khara (maraka) points

D1 Rasi

The main birth chart; everything, including the physical body (1st house).

D9 Navamsa

Inner strength and dignity; central to debilitation-cancellation and Shadbala.

D3 Drekkana

Each sign in three 10-degree parts (1st = same sign, 2nd = 5th, 3rd = 9th); constitution/longevity context.

D6 Shashthamsa

Each sign in six 5-degree parts (odd signs from Aries, even from Libra). The divisional dedicated to HEALTH and DISEASE.

22nd Drekkana lord (from Lagna)

A Khara (cause-of-affliction) point: the drekkana 21 places ahead of the Lagna's, landing in the 8th sign at the same ordinal.

64th Navamsa lord (from the Moon)

Another Khara/maraka point: the navamsa sign 63 places ahead of the Moon's navamsa (i.e. the 4th navamsa sign onward).

Impact: when a dasha period-lord coincides with a maraka lord, the forecast raises the period's sensitivity.

8. Health significations (reference data)

Planet -> body parts

Karaka organs/systems, e.g. Sun: heart, bones, vitality; Moon: mind, fluids, stomach; Mars: blood, muscles; Mercury: nerves, skin; Jupiter: liver, fat; Venus: kidneys, reproductive; Saturn: bones, joints, chronic; Rahu/Ketu: nervous/mysterious, surgery.

Planet -> ailments

Tendencies linked to each planet (e.g. Saturn: chronic, arthritic, degenerative; Mars: inflammation, accidents).

Sign -> body (Kalapurusha)

Head (Aries) to feet (Pisces) mapped to the twelve signs; also used for house body regions.

House health meaning

1 body/vitality, 6 disease, 8 chronic/surgery/longevity, 11 cure/recovery, 12 hospitalisation, etc.

KP house groups

Disease houses 6/8/12 (adverse); recovery houses 1/5/11 (supportive). Maraka houses 2/7.

Natural benefic/malefic

Jupiter, Venus, Mercury, (waxing) Moon are benefic; Sun, Mars, Saturn, Rahu, Ketu malefic. Affects affliction and aspect scoring.

9. Parashara health engine

Whole-sign analysis producing a vitality index (0-100, baseline 70). Factors and their score impact:

- Lagna lord in a dusthana (6/8/12): -12 and a constitution finding; in a kendra/trikona: +6.
- Lagna lord debilitated: -8; exalted/own: +6.
- Malefics in or aspecting the Ascendant: -4 each; body parts of those malefics + the Lagna sign are flagged.
- 6th house (disease) occupied/its lord in dusthana: -6. 8th house (chronic): -7. 12th house: -4.
- Moon afflicted or in dusthana (mind/emotions): -5.
- Any debilitated planet: -3 and its systems flagged.

The index is banded as robust (≥ 75), generally good (≥ 60), moderate (≥ 45) or delicate (< 45).

10. KP (Krishnamurti Paddhati) health engine

A planet delivers the houses it SIGNIFIES, chiefly via its star (nakshatra) lord, then by occupation/ownership. Health index baseline 70.

Cuspal sub-lords

The sub-lord of the 1st cusp (body), 6th (disease), 8th (chronic) and 12th (hospitalisation) cusps is examined. If the 1st sub-lord signifies 6/8/12 (and not 1/5/11) health is vulnerable (-10); leaning to 1/5/11 supports health (+6). For 6/8/12 cusps, a sub-lord signifying disease houses means that matter can manifest (8th -8, others -5).

Significators of 6/8/12

Planets that signify the disease houses (four-fold: occupant's star, occupant, owner's star, owner). Their governed organs are linked to disease and listed.

11. D6 Shashthamsa health engine

Reads the health-specific houses within the D6 chart (baseline 70):

- D6 Lagna lord in a D6 dusthana: -10 (weak disease-resistance).
- Malefics on D6 1/6/8/12: -4 to -6 each; their organs flagged. Benefics on D6 1/6: +3 (recuperation).

Produces a D6 health index banded strong / reasonably stable / guarded / fragile.

12. Vimshottari dasha and timing

The 120-year Vimshottari cycle starts from the Moon's nakshatra lord, with the balance proportional to the unelapsed nakshatra. Maha (MD), Antar (AD) and Pratyantar (PD) sub-periods follow the standard order and proportions (365.25-day year).

KP dasha health reading

- Each running lord is classified by the houses it signifies: 6/8/12 with no recovery link = Adverse; with 1/5/11 = Mixed; only 1/5/11 = Supportive.
- The joint MD/AD/PD verdict flags health-sensitive periods. Upcoming Antar Dashas where both the Maha and Antar lords signify disease houses are listed as adverse windows.

Parashara dasha schedule

- Each lord scored for adverse factors (dusthana placement/ownership, 2nd/7th maraka-house lordship, debilitation, being a 22nd-Drekkana or 64th-Navamsa lord) vs supportive factors (kendra/trikona, exaltation/own,

benefic nature).

- Upcoming Maha, Antar and Pratyantar periods are listed with a verdict, and adverse Antar Dashas are flagged as sensitive windows.

13. Period health forecast (synthesis)

PRINCIPLE: the PROMISE of disease in the natal charts (D1 Rasi + KP + D6 Shashthamsa) is primary and carries the most weight - it also determines the KIND of disease (the body parts and ailments highlighted). Dasha and transits are TRIGGERS that set the timing and carry far less weight on their own. When a trigger activates a planet/area that is already promised, that is a CONFLUENCE and the severity is escalated.

Promise (primary - natal charts)

- KP significator of disease houses: 6 -> +2.0, 8 -> +1.3, 12 -> +1.3 to the promise of that planet.
- D1 dusthana placement +1.2; uncanceled debilitation +1.2; 6th-lord +1.2, 8th-lord +1.0.
- D6 6th (disease) +1.3; D6 8th +0.9. Weak in Shadbala +0.6. 22nd-Drekkana / 64th-Navamsa lord +1.0 each.
- Body parts and ailments are distributed from the PROMISED planets (primary karaka x1.4, occupied-sign Kalapurusha x0.5), so the predicted 'kind of disease' is chart-led.

Triggers (secondary - timing)

- Maha Dasha lord weight 1.0, Antar 0.8, Pratyantar 0.5.
- Transit of Saturn/Mars/Rahu/Ketu over natal houses 1/6/8/12: +0.5 each; Saturn over the natal Moon (Sade Sati): +0.5.
- A trigger planet that carries NO promised disease has only a small effect on the 'kind of disease' (weight x0.4).

Confluence (trigger activates a promise)

- If a current dasha/transit trigger is also a promised-afflicted planet, its body-part weight is multiplied by 1.6 and the risk rises sharply.

Risk score

promiseMagnitude x0.5 + confluenceStrength x1.8 + bare-trigger x0.3 + transit-hits x0.4. Bands: >=9 Elevated, >=5 Moderate, else Lower. Thus a strong promise that is currently triggered (confluence) reads highest; triggers alone, with no promise, stay low.

13a. 20-year health timeline

A forward 20-year chart at Pratyantar (3-level) granularity scores EVERY period independently under both Parashara and KP, considering the 22nd Drekkana and 64th Navamsa. A per-planet disease weight is precomputed from the natal charts (the promise): Parashara from dusthana placement/ownership, 6th/8th/maraka lordship, uncanceled debilitation and the Khara points; KP from the PRIMARY (star-lord) significations of 6/8/12 minus 1/5/11, plus the Khara points. A period's severity = 3 x (Maha lord weight) + 2 x (Antar) + 1 x (Pratyantar).

Severity is normalised within the 20-year window and banded Low / Moderate / High / Adverse / Fatal for each system. 'Fatal' is gated - it appears only when the Maha or Antar lord is a maraka lord (2nd/7th/8th lord or a Khara point) - and denotes the astrologically most demanding windows, NOT a prediction of death. Each row also lists the area of concern (body parts, plus 'accident risk' and 'mind/emotions' tags). The accompanying graph plots vitality (100 - normalised severity) over time, Parashara in indigo and KP in gold.

14. Ask-a-Question module

A free-text question is classified into a health topic (heart, cancer, diabetes, kidney, liver, mental, accident, BP, respiratory, joints, skin, digestive, eye, reproductive, thyroid, neuro, infection, or general). Each topic defines its karaka planets, houses, malefic triggers and body parts.

Predisposition score

Sums affliction of the topic's karakas and houses: KP signifies 6 (+1.5) / 8 (+0.8) / 12 (+0.4); dusthana placement +1.2; debilitation +1.5; malefic conjunction +0.5; D6 6th +1.2 / 8th +0.8; maraka lord +1.0 to 1.2; house malefic occupants and adverse cuspal sub-lords add too.

Likelihood bands

Total ≥ 10 High predisposition; ≥ 7 Elevated; ≥ 4.5 Moderate; ≥ 2.5 Mild; else Low. At or above 4.5 the answer is 'positive' and shows the organ and timing.

Organ pinpointing

For named topics the stated organ leads; for open-ended ones (cancer/general) the organ is derived from the most afflicted karaka and house.

Timing

Upcoming Antar Dashas (next ~45 years) whose Maha/Antar lords are topic-relevant and malefic are scored; the earliest strong window is refined to its Pratyantar sub-period. Output is a sensitive window, never a deterministic event.

15. Accident and injury risk

A dedicated module evaluates accident-proneness as a natal PROMISE, then times it. Promise factors: Mars linked (conjunction/aspect) with Rahu (+2.5), Ketu (+2.5) or Saturn (+2.2); Mars in a dusthana (+1.5); Rahu/Ketu in houses 1/4/8 (+1.2); malefics in the 8th (+1.0 each) or 6th (+0.8 each); Mars/Saturn/Rahu/Ketu afflicting the Ascendant or its lord; malefics in the 4th (vehicles, +0.8 - vehicular risk); the 8th lord in a dusthana; D6 Mars/Rahu/Ketu in houses 1/6/8; and a malefic 8th cuspal sub-lord signifying disease houses.

Levels: index ≥ 7 High, ≥ 4.5 Elevated, ≥ 2.5 Moderate, else Low. The likely nature is inferred (falls/fractures from Saturn links; cuts/burns/surgery from Mars-Rahu/Ketu; vehicular from a 4th-house affliction; poisoning/electrical from Rahu/Ketu in the 8th). Triggers: dasha periods whose Maha and Antar lords are both accident-significators (Mars/Rahu/Ketu/Saturn or the 6th/8th lords) are listed as accident-sensitive windows, and current Mars/Saturn/Rahu/Ketu transits over natal houses 1/4/6/8 are flagged.

16. Transits (Gochara)

Current sidereal positions of all bodies are mapped through the natal whole-sign houses. Transits of Saturn, Rahu, Ketu and Mars over the natal Ascendant or houses 6/8/12, and Saturn around the natal Moon (Sade Sati), are flagged as health-relevant timing.

17. Reading the indices

Parashara vitality index / KP health index / D6 health index

0-100; higher is better. They use different methods, so differences are expected; convergence across them is the stronger signal.

Current-period risk

Lower / Moderate / Elevated for the running dasha, from the synthesis.

Shadbala (Rupas)

Per-planet strength vs requirement; shown with retrograde/combust markers in the birth chart.

18. Accuracy and limitations

- Positions are accurate to a few arc-minutes - ample for signs, nakshatras and sub-lords, but not a Swiss-Ephemeris-grade tool.
- Some Shadbala sub-balas (Tribhaga, year/month/day/hour lords, Yuddha) and the full seven-varga Saptavargaja are approximated; declination assumes ~0 ecliptic latitude. Results are reliable for the strong/weak classification used here.
- Interpretations are deterministic summaries of classical rules, not the judgement of an experienced astrologer, and never a medical diagnosis.
- Daylight-saving handling depends on the UTC offset entered.

19. Glossary

Lagna

Ascendant - the rising sign/degree.

Dusthana

Houses 6, 8, 12 (difficulty/disease).

Kendra / Trikona

Angular houses 1/4/7/10 / trines 1/5/9.

Karaka

Significator (planet representing a matter or organ).

Maraka / Khara

Death-/affliction-inflicting points and house lords (2nd, 7th, and the 22nd-Drekkana / 64th-Navamsa lords).

Vargottama

Same sign in the Rasi (D1) and Navamsa (D9).

Dasha / Bhukti

Planetary period / sub-period in the Vimshottari system.
